

CLEAN COAL. COOL.

Clean coal means energy security, jobs and economic stimulus along with a cleaner environment.

What is clean coal? Part One of clean coal has taken place in recent years, as billions of dollars in new technologies scrub away emissions.

Part Two builds on this with new, efficient coal-fueled power plants with reduced carbon footprints. Eventually, carbon capture and storage will allow plants to recycle the CO₂ back underground in deep storage or even oilfields, increasing U.S. oil production.

Americans overwhelmingly support the use of coal. A landslide 72% of opinion leaders recently said yes to the use of coal to generate electricity and 69% say coal is a fuel of the future.

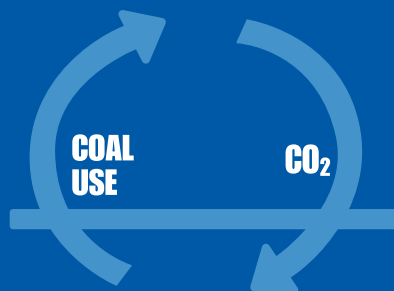

CLEAN COAL PART I

America has more coal than any nation, and coal fuels half of our electricity. The world is turning to coal in increasing amounts. The more we use it, the less we need to rely on foreign energy.

So let's use coal to deliver energy security, more jobs and a stronger economy. And let's solve the technology and regulatory hurdles to let America recycle its carbon.

CLEAN COAL PART II

Clean coal. It's a stimulus package that we can all agree on.

Peabody Energy is the world's largest private sector coal company and a global leader in clean coal solutions. Find out more at CoalCanDoThat.com.
